Archive Document Storage Expands

Barrie, ON – September 03, 2009 – Archive Document Storage has outgrown its current facility and is expanding to a new location. Remaining true to the local community the company will continue to reside in Barrie and occupy a new larger facility better able to service their expanding business.

Archive is a records storage and management company which specializes in quick document retrieval, as well as, protection against identity theft, fire and flood. In spite of the current economic downturn the company continues to flourish, becoming one of Barrie's local success stories. This is largely due to the exceptional customer service which is offered. The company has maintained a small business approach while taking on big business within the document storage industry. Offering, friendly efficient service and the assurance that your documents are entrusted to capable hands.

According to Daryl Woytowicz, General Manager of Archive, "We are excited about the growth of our company and the expansion into a new facility. The building is higher density and strategically located near the highway, so we will be able to provide improved service to our clients while maintaining the same quality and security they have come to expect from us".

This need for expansion is thanks in part to the increased popularity of offsite document storage from such public practices as dentists, doctors and lawyers. There is a growing trend among this professional community to move valuable documents offsite to decrease the liability of identity theft and protect confidential documents.

In the midst of an unstable economy, using a records centre makes sound economic sense. Offsite storage frees valuable office space for more productive usage. When compared with the other offsite option of ministorage, two advantages become clear: records centre are substantially less expensive and significantly more secure than self-storage. With sophisticated tracking software, records centre clients enjoy improved access to stored files. All of these factors have contributed to Archive Document Storage's strong performance and continued growth.
